

# **LUXEON Rebel**

## General purpose white

The LUXEON Rebel general purpose white line of LEDs are ideal for all lighting and illumination applications. These flux differentiated parts, like all other LUXEON Rebel LEDs, provide the industry's best lumen maintenance, superior reliability and quality white light that make them the most widely used power LEDs today.

#### **FEATURES AND BENEFITS**

| Deliver more usable light and higher flux density                                                          |
|------------------------------------------------------------------------------------------------------------|
| Optimize applications to reduce size and cost                                                              |
| Small footprint to tightly pack the LEDs for mixing                                                        |
| Utilize standard FR4 PCB technology for simplify manufacturing through the use of surface mount technology |
| UL-recognized component [E327436]                                                                          |

#### **PRIMARY APPLICATIONS**

## General Product Information

### **Product Nomenclature**

LUXEON Rebel is tested and binned at 350 mA, with current pulse duration of 20 ms. All characteristic charts where the thermal pad is kept at constant temperature (25°C typically) are measured with current pulse duration of 20 ms. Under these conditions, junction temperature and thermal pad temperature are the same.

The part number designation is explained as follows:

LXML-ABCD-EFGH

#### Where:

A — designates radiation pattern (value P for Lambertian)

B — designates color (W = White)

C — designates tint variant (C = Cool-White or N = Neutral-White)

D — designates test current (value I for 350 mA)

E — reserved for future product offerings

FGH — minimum luminous flux (lm)

Therefore products tested and binned at 350 mA follow the part numbering scheme:

LXML-PWxI-0xxx

### Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Lumileds projects that LUXEON Rebel products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700 mA. This projection is based on constant current operation with junction temperature maintained at or below I35°C. This performance is based on independent test data, Lumileds historical data from tests run on similar material systems, and internal LUXEON reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

### **Environmental Compliance**

Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON Rebel is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the REACH and RoHS directives. Lumileds will not intentionally add the following restricted materials to the LUXEON Rebel: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

### Luminous Flux Characteristics

#### Notes for Table 1:

- 1. Minimum luminous flux performance guaranteed within published operating conditions. Lumileds maintains a tolerance of  $\pm$  6.5% on flux measurements.
- 2. Typical luminous flux performance when device is operated within published operating conditions.

### Flux Performance, Binning, and Supportability

LEDs are produced with semiconductor technology that is subject to process variation, yielding a range of flux performance that is approximately Gaussian in nature. In order to provide customers with fine granularity within the overall flux distribution, Lumileds separates LEDs into fixed, easy to design with, minimum luminous flux bins. To verify supportability of parts chosen for your application design, please consult your Lumileds representative.

## Optical Characteristics

## Lambertian LUXEON Rebel at Test Current [1] Thermal Pad Temperature = 25°C

Table 2.

|                | Colo  | r Temperatur<br>CCT | e <sup>[2], [3]</sup> | Typical Total Included Angle [5] | Typical Viewing Angle [6] |  |
|----------------|-------|---------------------|-----------------------|----------------------------------|---------------------------|--|
| Color [6], [7] | Min.  | Тур.                | Max.                  | (degrees) $\theta_{0.90V}^{[4]}$ | (degrees)<br>2θ 1/2       |  |
| Cool-White     | 4500K | 6500K               | 10,000K               | 160                              | 120                       |  |
| Neutral-White  | 3500K | 4100K               | 4500K                 | 160                              | 120                       |  |

#### Notes for Table 2:

- 1. Test current is 350 mA for all LXML-PWx1-0xxx products.
- 2. CCT ±5% tester tolerance.
- 3. Typical CRI (Color Rendering Index) for cool-white and neutral-white is 70.
- 4. Total angle at which 90% of total luminous flux is captured.
- 5. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is ½ of the peak value.
- 6. All white products are built with Indium Gallium Nitride (InGaN).
- 7. Cool-white and neutral-white power light sources represented here are IEC825 class 2 for eye safety.

### Electrical Characteristics

# Electrical Characteristics at 350 mA for LUXEON Rebel, Part Numbers LXML-PWxI-0xxx, Thermal Pad Temperature = 25°C

Table 3.

|               |      |                 |      | Typical Temperature                         | Typical Thermal    |
|---------------|------|-----------------|------|---------------------------------------------|--------------------|

# Reflow Soldering Characteristics

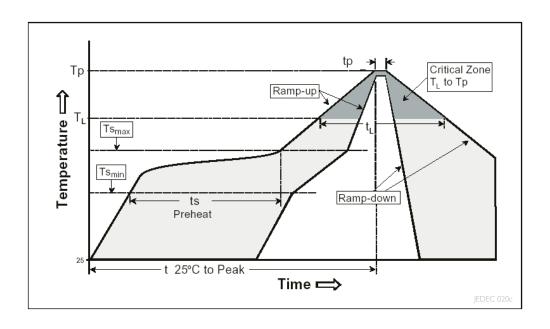

Table 7.

| Profile Feature                                              | Lead Free Assembly |  |
|--------------------------------------------------------------|--------------------|--|
| Average Ramp-Up Rate (Ts <sub>max</sub> to T <sub>p</sub> )  | 3°C / second max   |  |
| Preheat Temperature Min (Ts <sub>min</sub> )                 | 150°C              |  |
| Preheat Temperature Max (Ts <sub>max</sub> )                 | 200°C              |  |
| Preheat Time (ts <sub>min</sub> to ts <sub>max</sub> )       | 60 - 180 seconds   |  |
| Temperature (T <sub>L</sub> )                                | 217°C              |  |
| Time Maintained Above Temperature $T_L$ $(t_L)$              | 60 - 150 seconds   |  |
| Peak / Classification Temperature (T <sub>p</sub> )          | 260°C              |  |
| Time Within 5°C of Actual Peak Temperature (t <sub>p</sub> ) | 20 - 40 seconds    |  |
| Ramp - Down Rate                                             | 6°C / second max   |  |
| Time 25°C to PeakTemperature                                 | 8 minutes max      |  |

#### Notes for Table 7:

- All temperatures refer to the application Printed Circuit Board (PCB), measured on the surface adjacent to the package body.

## Mechanical Dimensions

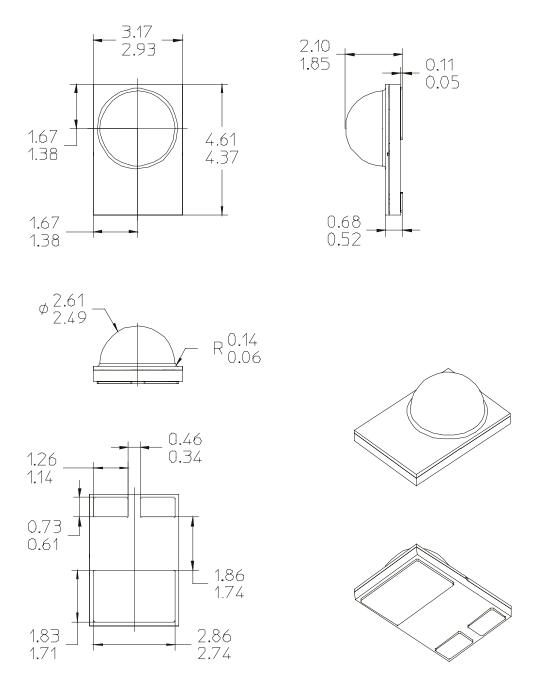

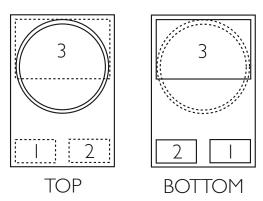

Figure I. Package outline drawing.

#### Notes for Figure 1:

- Do not handle the device by the lens—care must be taken to avoid damage to the lens or the interior of the device that can be damaged by excessive force to the lens.
- Drawings not to scale.
- All dimensions are in millimeters.
- The Thermal Pad is electrically isolated from the Anode and Cathode contact pads.

# Pad Configuration

| PAD | FUNCTION |
|-----|----------|
|     | CATHODE  |
| 2   | ANODE    |
| 3   | THERMAL  |

Figure 2. Pad configuration.

#### Note for Figure 2:

- The Thermal Pad is electrically isolated from the Anode and Cathode contact pads.

### Solder Pad Design

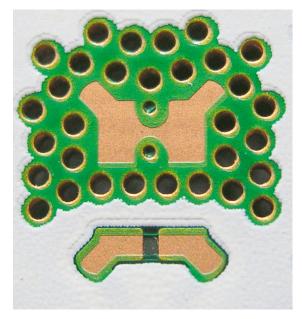

Figure 3. Solder pad layout.

#### Note for Figure 3:

- The photograph below shows the recommended LUXEON Rebel layout on Printed Circuit Board (PCB). This design easily achieves a thermal resistance of 7K/W.
- Application Brief AB32 provides extensive details for this layout. In addition, the .dwg files are available at www.lumileds.com.

## Product Binning and Labeling

#### **Purpose of Product Binning**

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage  $(V_{\epsilon})$ .

#### **Decoding Product Bin Labeling**

LUXEON Rebel emitters are labeled using a three or four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 3-variable bin combination. Using these codes, it is possible to determine optimum mixing and matching of products for consistency in a given application.

Reels of Cool-White and Neutral-White emitters are labeled with a four digit alphanumeric CAT code following the format below.

#### ABCD

A = Flux bin (J, K, L, M etc.) B and C = Color bin (W0, U0, V0 etc.) D =  $V_r$  bin (D, E, F, G etc.)

## Luminous Flux Bins

Table 8 lists the standard photometric luminous flux bins for LUXEON Rebel emitters (tested and binned at 350 mA).

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

|          | Table 8.                 |                          |  |  |  |  |  |

#### Note for Table 10:

- Lumileds maintains a tester tolerence of  $\pm$  0.005 on x, y color coordinates.

# Forward Voltage Bins

Table 11 lists minimum and maximum  $V_f$  bin values per emitter. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance.

Table II.

| V <sub>f</sub> Bins |                         |                         |  |  |  |  |
|---------------------|-------------------------|-------------------------|--|--|--|--|
| Bin Code            | Minimum Forward Voltage | Maximum Forward Voltage |  |  |  |  |
| B                   | 2.55                    | 2.79                    |  |  |  |  |
| <u>В</u> С          |                         | 3.03                    |  |  |  |  |
| D                   | 3.03                    | 3.27                    |  |  |  |  |
| Е                   | 3.27                    | 3.5 l                   |  |  |  |  |
| F                   | 3.51                    | 3.75                    |  |  |  |  |

#### **About Lumileds**

Lumileds is the light engine leader, delivering innovation, quality, and reliability.

For 100 years, Lumileds commitment to innovation has helped customers pioneer breakthrough products in the automotive, consumer and illumination markets.

Lumileds is shaping the future of light with our LEDs and automotive lamps, and helping our customers illuminate how people see the world around them.
